

When your dog has arthritis...

1 injection can deliver up to **1 full year** of
romps and **runs**

Introducing

Synovetin OA

Talk to your veterinarian about Synovetin OA™ — a breakthrough new product that:

- Reduces inflammation and pain
- Provides long-lasting relief
- Improves your dog's mobility

Synovetin OA™ is given as an in-office injection

Your veterinarian will give your dog a sedative, then use a syringe to inject Synovetin OA™ directly into the affected joint(s).

Following the injection, your dog can go home the same day with no need for restraint or rehabilitation.

You can allow your dog to return to whatever level of activity he or she is comfortable with while Synovetin OA™ goes to work to reduce the pain and inflammation of OA over time.

Synovetin OA™ uses special “conversion electron” energy to treat OA

Unlike other treatments that may just mask OA pain, Synovetin OA™ is a new type of therapy containing active microparticles that treat the disease at its source.

Once injected into your dog's joint, these particles are absorbed by and deactivate the inflammation-producing cells that cause the joint damage and pain of OA.

This is a very targeted way of treating OA that relieves pain and suppresses inflammation for up to 1 year.

No clinically significant safety
issues have been reported with
Synovetin OA™

In the clinical studies, no significant side effects or safety issues were reported by either the pet parents of the dogs or the researchers who were treating them.

Introducing

Synovetin OA

Relieving your dog's arthritis pain

Dogs can get arthritis in their joints just like people

Veterinarians refer to this as canine osteoarthritis, or just OA. This condition is very common. In fact, roughly 25% of all adult dogs in the US have OA, or about 1 in 4.

If OA isn't treated effectively, it can cause extreme pain

Due to cartilage loss in OA, the joint bones rub against each other when your dog moves, causing pain. This pain can significantly affect your dog's quality of life, resulting in:

- Difficulty going up and down stairs
- Struggling to get up after lying down
- Trouble walking on slick floors
- Problems hopping in and out of vehicles
- Difficulty jumping on and off furniture
- Behavioral changes (e.g., aggression, difficulty squatting to toilet)

Synovetin OA™ (sin-OH-vuh-tin OA) is a new approach to treating OA

Synovetin OA™ requires just one treatment that lasts for up to one full year. It's an injection that has been proven effective in the treatment of dogs with elbow OA.

Improves active lifestyle

Provides long-lasting pain relief

May help keep OA from getting worse

Synovetin OA™ gives dogs up to 1 full year of relief with just 1 injection

The effectiveness of Synovetin OA™ was evaluated in multiple clinical studies of dogs with elbow OA.

Researchers evaluated Synovetin OA™ after 1 injection into the elbow joint of dogs diagnosed with OA to determine how well it was able to improve mobility and reduce pain and inflammation over the next 12 months.

Overall treatment success

The majority of dogs showed significant improvement after treatment with Synovetin OA™ compared to how they were functioning before getting the injection.

Following the Synovetin OA™ injection there was:

- Less lameness, as assessed by veterinarians
- Less pain and a greater level of activity, as assessed by pet parents

Synovetin OA™ is a new therapy that can help restore your dog's active life

.....

Synovetin OA™ is safe for your dog, your family, and you

Because Synovetin OA™ works only inside the joint, your dog's body, haircoat, bodily fluids, waste, and surroundings will not be affected.

Your veterinarian will discuss a few simple instructions with you when you take your dog home after the procedure.

Just 1 injection improves the signs of OA for up to 1 full year

Your veterinarian can tell you more about how Synovetin OA™ works to reduce the debilitating pain of OA and helps restore your dog's ability to be a playful, happy, life-loving pet.
